Welcome.

Your mission, should you choose to accept it, is to help us identify report of randomised controlled trials (RCTs).

If you know what a randomised trial is, you can skip the next stage. If you don't, we'll teach you.

[I'm familiar with RCTs](#) [I don't know what an RCT is](#)

An example

Your job is to find out whether the title and abstract of a citation is describing a **randomised controlled trial** in humans.

Effectiveness of the parent-mediated intervention for children with autism spectrum disorder in south Asia in India and Pakistan (PASS): A randomised controlled trial.

Background: Autism spectrum disorder affects more than 5 million children in south Asia. Although early interventions have been used for the treatment of children in high-income countries, no substantive trials have been done of the interventions adapted for use in low-income and middle-income countries (LMICs). We therefore assessed the feasibility and acceptability of the parent-mediated intervention for autism spectrum disorder in south Asia (PASS) in India and Pakistan. **Methods:** A single-blind randomised trial of the comparison of 12 sessions of PASS (plus treatment as usual) with treatment as usual alone delivered by non-specialist health workers was done at two centres in Goa, India, and Rawalpindi, Pakistan. Children aged 2-9 years with autism spectrum disorder were **randomly assigned** (1:1) by use of probabilistic minimisation, controlling for treatment centre (Goa or Rawalpindi), age (<6 years or >6 years), and functional impairment (Vineland Adaptive Behaviour Scale Composite score <65 or >65). The primary outcome was quality of parent-child interaction on the Dyadic Communication Measure for Autism at 8 months. Analysis was by intention to treat. The study is registered with ISRCTN, number ISRCTN79675498. **Findings:** From Jan 1 to July 30, 2013, 48 children were **randomly allocated**, 32 to the PASS group (18 in Goa and 17 in Rawalpindi) and 33 to the treatment-as-usual group (15 in Goa and 18 in Rawalpindi). 26 (81%) of 32 participants completed the intervention. After adjustment for minimisation factors and baseline outcome, the primary outcome showed a treatment effect in favour of PASS in parental synchrony (adjusted mean difference 0.25 [95% CI 0.14 to 0.36]; effect size 1.61 [95% CI 0.90 to 2.32]) and initiation of communication by the child with the parent (0.15 [0.04 to 0.26]; effect size 0.99 [0.29 to 1.68]), but time in mutual shared attention was reduced (-0.16 [-0.26 to -0.05]; effect size -0.70 [-1.16 to -0.23]). **Interpretation:** Our results show the feasibility of adapting and task-shifting an intervention used in a high-income context to LMICs. The findings also replicate the positive primary outcome treatment effects of a parent-mediated communication-focused intervention in the original UK Preschool Autism Communication Trial, with one negative effect not reported previously. **Funding:** Autism Speaks, USA.

← The **title** typically describes the nature of the research.

← The **abstract** describes the study in a bit more depth, like a summary paragraph.

[Next](#)

The title has a phrase, 'randomised controlled trial' in it.

[Next](#)

The **abstract** also refers to the trial as it describes children being 'randomly allocated' to different treatments.

Great, well done!

Just a few more tips about how we're here to help you.

When you're looking at a citation, you'll notice some highlights. Words and phrases highlighted yellow are those which may indicate the citation is describing an RCT or CCT. Citations with highlighted red words are more likely to be Reject records.

So far, you've seen an easy one.

Only 6% of the world speak English as a first language, and 75% do not speak English at all. Therefore, we translate Cochrane evidence to make it more accessible worldwide. Several hundred volunteer translators have already translated thousands of Cochrane Reviews into their languages. If you want to help us and join our worldwide network of translators, we would love to have you.

[Find out more about our translation activities and approach to translation.](#)

We are currently looking for volunteers to translate from English into the following languages:

• Chinese (simplified and traditional)	• Malay
• Croatian	• Persian
• French	• Polish
• German	• Russian
• Japanese	• Tamil
• Korean	• Thai

If you would like to contribute to one of the above languages, please click the 'Become a translator' button below. You will be taken to the 'My Account' page, where you will be asked to create a Cochrane account. If you already have a Cochrane account, you can log in.

[Become a translator](#)

If your language is not listed above, please [join our mailing list](#) to stay up-to-date with translation news and opportunities to get involved in other languages. You can also join [Cochrane TaskExchange](#), where Cochrane contributors post opportunities for ad hoc translation in a variety of languages, as well as other tasks related to Cochrane Reviews.

Dear Yanina,

Thank you for your message. I have checked your Cochrane account profile and can see that you are entitled to a five-year membership as an author. This is in accordance with the Cochrane membership thresholds which are available here: <https://join.cochrane.org/cochrane-membership-thresholds>

I have prompted the system to send you an email with instructions on how to activate your membership. Please get back in touch if you did not receive this message.

You can check your membership status and renewal date at any time by logging in to your Cochrane account: <https://account.cochrane.org/>

Best wishes,
Ursula

08:09 (Hace 10 minutos.)

Dear Yanina Squassero,

Thank you for your recent contributions to Cochrane's work. We're very pleased to inform you that you're now eligible to become an official member of Cochrane!

Becoming a Cochrane member helps you – and us! – to track and recognize your contributions, and to use your particular skills and interests most effectively. You'll be able to continue to build your skills and expertise as an active contributor to Cochrane's work, and get information and updates targeted to your skills, interests, and training needs. As a member, you'll also qualify to vote in Cochrane elections, and help to shape our future policies and plans.

In agreeing to become a member and completing the registration process, you will also be required to adhere to [Cochrane's principles](#), as well as to confirm that you are not currently employed by a medical device or pharmaceutical company.

To review membership terms and conditions in full and complete the registration process, please click on this link [Click Here](#)

Thanks again for being a part of Cochrane, and we look forward to welcoming you as a member!

Kind regards

Dear Yanina Sguassero

Thank you very much for agreeing to the terms and conditions of your Cochrane membership. Throughout your membership you will be able to stand for internal governance positions, vote in Cochrane elections and at general meetings and you will receive a number of membership related emails. Your membership will expire on 2023-10-31.

We are really pleased that you have become a Cochrane member and would like to thank you again for all that you have contributed to Cochrane's success. We hope that we will be able to engage you in new opportunities and exciting projects in the future.

If you have any questions about your Cochrane membership please contact us at membership@cochrane.org.

We look forward to working with you again soon.

Many thanks
